FieldGrow

Business Operating System for Field Service Businesses

Run your field team. Get more customers. Get paid faster. Bring customers back.

Executive Promise

FieldGrow is not another field-force tracker. It is a complete operating system for service businesses that need to run technicians today — and grow repeat revenue tomorrow.

Most FSM tools stop at: Customer !’ Job !’ Employee !’ Invoice. FieldGrow continues the loop: Customer !’ Lead !’ Booking !’ Job !’ Service !’ Invoice !’ Review !’ Marketing !’ Repeat Customer !’ New Job.

That closed loop is our unique advantage. Every completed job becomes a growth asset.

Unique selling proposition: Service-to-Growth Engine™

How FieldGrow Helps Business Owners

- Unify WhatsApp, scheduling, dispatch, invoices, reviews, and marketing into one system.
- Give owners a live picture of jobs, people, cash, and missed opportunities.
- Turn finished services into Google reviews, social proof, AMC renewals, and repeat bookings.
- Migrate existing Excel / WhatsApp / Tally workflows into FieldGrow with free or low-cost onboarding.

Small businesses (5–20 technicians)

- Replace scattered WhatsApp + Excel chaos with one daily command center.
- Stop losing leads and pending quotations.
- Start recovering AMC and maintenance renewals automatically.

Mid-size businesses (20–100 technicians)

- Standardize quality with checklists, photos, signatures, and service scores.
- Measure true job profitability and technician performance.
- Scale WhatsApp booking and portfolio website acquisition.

Larger multi-branch operators

- Centralize customers, assets, and knowledge so the business owns the data.
- Run campaigns across dormant customers and open quotations.
- Track marketing channels that actually produce paying jobs.

Core Field Management Features

Admin Web & Mobile Command Center

Business impact: Owners see today's jobs, statuses, ETAs, and exceptions without calling every technician.

Technician App (Offline-first)

Business impact: Works in basements, industrial sites, and low-network areas. Photos, checklists, and signatures sync later.

Smart Scheduling, Dispatch & Maps

Business impact: Assign the right person, plan routes, and track field movement without surveillance-only dashboards.

Customer 360

Business impact: Lifetime revenue, assets, job history, complaints, AMC status, and a clear Next Best Action.

Invoicing, Payments, Payroll & Expenses

Business impact: Close the cash loop. Reduce leakage when cash is collected on-site.

Job Profitability

Business impact: See profit after parts, travel, technician cost, and commission — not just revenue vanity metrics.

Employee Performance that coaches

Business impact: First-time fix, ratings, revenue generated, and complaint recurrence — not only kilometers driven.

Service Quality Score

Business impact: Punctuality, checklist completion, ratings, and rework combined into one quality signal.

Growth & Unique Features

Dynamic Portfolio Website

Business impact: Launch a branded booking site with services, before/after work, reviews, and service areas — then deploy to a custom domain.

WhatsApp-first Booking & Communication

Business impact: Convert Indian customers the way they already buy: chat !’ slot !’ technician !’ invoice !’ review.

Google Reputation Engine

Business impact: After every happy job, request reviews, respond smarter, and turn reputation into new customers.

1-Click Social Content

Business impact: AI turns completed jobs into WhatsApp/Instagram posts with optional before/after proof.

Missed Revenue Engine

Business impact: Surface AMC renewals, dormant customers, stale quotations, and due maintenance with one-click actions.

AI Recommendations & Packages

Business impact: Suggest next service timing and annual packages that convert one job into recurring revenue.

Referral & Reactivation Campaigns

Business impact: Bring customers back before competitors do — with measurable channel attribution.

Low-cost Migration

Business impact: Bring customers, services, and history from existing tools into FieldGrow without a painful reboot.

Service-to-Growth Engine™ — The Story

- 1. Customer books AC Service – ¹999.
- 2. Technician arrives, starts job, captures before/after photos, collects signature and payment.
- 3. Invoice is generated instantly.
- 4. Customer receives WhatsApp completion message and Google review request.
- 5. AI drafts social content from the job and identifies next service in ~6 months.
- 6. Automatic reminder + annual maintenance package is offered before the due date.
- 7. Customer books again — one service creates the next revenue event.

Problems We Eliminate

- Owner has no live visibility of technicians and jobs.
- Leads disappear inside WhatsApp chats.
- Business knowledge leaves when employees leave.
- Repeat customers are never followed up.
- Quotations expire without follow-up.
- Cash collection is ambiguous.
- Profitability by job/service is unknown.
- Marketing spend cannot be tied to booked jobs.
- The owner personally becomes the operating system.

Why Business Owners Choose FieldGrow

If you currently run on WhatsApp + phone calls + Excel + Tally + UPI + paper, your tools work individually — but they do not form a system.

FieldGrow is that system: field operations plus a growth engine designed for Indian service businesses.

Ask yourself: How do you assign jobs today? Who hasn't been serviced in six months? Which quotations are pending? Which technician creates the most profitable work?

Those answers — and the actions that follow — are exactly what FieldGrow delivers.

Next Step

Request a discovery demo for AC/HVAC, CCTV, pest control, cleaning, electrical, or plumbing businesses.
